Netgear Nighthawk app is designed by Netgear to manage all Netgear devices. You can setup, login, install and access settings of the networking devices over the app. Go through below sections to learn how to download nighthawk router app and manage corresponding devices.

Note: You can also set up Nighthawk WiFi router with the help of routerlogin web-based interface (manual setup).

Nighthawk App Download

Learn how to download the Nighthawk router app in easy steps.

For Android & iPhone Users

Go to the Google Play Store on android device and App Store on iPhone.

Type Netgear nighthawk and search.

Choose the right app from the results.

Download nighthawk app and install it on your mobile device.

How to Login to Netgear Nighthawk App?

You can login once you download Nighthawk router app. Follow below steps for a quick login:

Connect mobile with router's WiFi network. Take note of default SSID given on the label behind the router.

Open app, it will ask for login credentials, here fill the default credentials.

Once you complete the login, the app will search the router to pair. It automatically detects your router and shows the message 'Router is Now Active'.

After that answer security questions and click on the Next button. It updates available Firmware automatically.

Now your Netgear Nighthawk app is completely set up. If you want to manage other settings, then click on the router's image and do that.

Control Settings Using Netgear Nighthawk App

Explore all the settings that you can do on the Netgear Nighthawk router app.

Change Admin Login Credentials

- To change admin login credentials, log in to the app by default login credentials.
- Then, navigate to Advanced Settings > Security > Wireless settings and Change the log-in detail. At last click on “Apply Changes”.

Update Firmware

- Access app interface, go to “Advanced Settings”, and select the Upgrading Firmware option.
- Also, you can check for recent available firmware, if available then click on update, app will automatically update it.

Set Parental Control

- Go to Account Settings in the Netgear Nighthawk app, Select the Security Option, and click on the toggle next to Child Safe.
- Manage other settings according to you, and set the timer with a web safe.

Guest Network Setup

- Log in to the Netgear Nighthawk app and Navigate to the Wireless > Basic Settings > Guest > Turn on the Guest Network.
- Select the name and password of the guest network. Set the number of guest connections and click on Apply changes.

Wi-Fi Channel Configuration

- Login to the Nighthawk router App and then go to Advanced Settings > Wireless, select the channel that you want to set for both 2.4GHz and 5GHz bands.
- Always select the channel with the least traffic to optimize your WiFi connection.
